

# Health Care “Crisis”?

Looking back at the Covid-19 pandemic, have you wondered what exactly is the nature of the health care “crisis” we have been going through, and which has been so widely reported in social media and “news” outlets around the world?

After an initial 4-week period of scare and fear of an “unknown” virus from China in March-April of 2020, the cure of hydroxychloroquine arose as a proven way to resolve this “crisis” in a reasonable, rational manner. However, the medical community had other ideas.

Instead of backing the rational knowledge and information from frontline doctors who actually treat patients with Covid-related virus conditions, the medical hierarchy struck back, dismissing HCQ as unproven, risky, and unreliable. Randomized clinical studies and actual success with HCQ from practicing physicians were rejected, as the “crisis” was converted into a seemingly interminable political “state of emergency” lock-down of the economy and a masking of the entire population.

And what of the proven HCQ regimen to cure the virus? CDC, FDA, backed by big tech social media, opposed, dismissed, and avoided any serious discussion of the HCQ remedy, as the race for a “vaccine” was their only acceptable solution. Money (billions!) flowed into Maryland’s Johns Hopkins Center, for example, for research and study of the Covid-19. Reports, testing, and data blossomed (research?). And, HCQ became “restricted” in use, dismissed, and banned from discussion on social media. Fake news flourished to maintain the fear promoted in this highly politicized mask-wearing virus “crisis”.

Now, comes grassroots citizens to question this whole “crisis” to open the books, records, and data to look behind the veil of secrecy maintained by government health care agencies who are “managing” the crisis. Dr. Fauci’s role as figure-head “manager” is just the tip of the iceberg.

If you want to raise your voice and offer your comments on this health care “crisis”, there is now a citizens’ petition before the FDA on the pertinent issues that everyone outside the government special interest circle would like to know. Take a look at the abundance of evidence and issues raised in the citizens’ petition from “Stand for Health Freedom” by **Robert F. Kennedy, Jr.** and **Dr. Meryl Nass**, on behalf of Children’s Health Defense (CHD)

# Stand for Health Freedom

---

Amid growing safety concerns, Robert F. Kennedy, Jr. and Dr. Meryl Nass, on behalf of Children's Health Defense (CHD), filed a **Citizen Petition** with the U.S. Food and Drug Administration (FDA) asking the agency to immediately revoke the Emergency Use Authorizations (EUAs) for COVID vaccines and to refrain from licensing them. <https://www.regulations.gov/document/FDA-2021-P-0460-0001>

**This is an official Citizen's Petition that goes through a formal process. The FDA must respond, and if not satisfied with the response, the petitioner can take the matter to court.**

The Petition states:

- FDA should revoke all EUAs for any COVID vaccine because the current risks of serious adverse events or deaths outweigh the benefits, and because existing drugs provide highly effective prophylaxis and treatment.
- FDA should immediately stop allowing minors to participate in COVID vaccine trials.
- FDA should immediately revoke approval that pregnant women may receive any EUA or licensed COVID vaccines and issue public guidance to that effect.
- FDA should amend its guidance for the use of the chloroquine drugs, ivermectin and any other drugs demonstrated to be safe and effective against COVID, to comport with current scientific evidence of safety and efficacy, and issue notifications to all stakeholders.
- FDA should issue guidance to the Secretary of Defense and the President to NOT grant an unprecedented presidential waiver of prior consent regarding COVID vaccines for our service members.
- FDA should issue guidance affirming that all citizens have the option to accept or refuse administration of investigational COVID vaccines without adverse work, educational, or other non-health related consequences.
- Pending revocation of COVID vaccine EUAs, FDA should issue guidance that all marketing and promotion of COVID vaccines must refrain from labeling them "safe and effective."

## HOW TO SUBMIT YOUR COMMENT:

GO to the FDA Petition page (this will be Document ID FDA-2021-P-0460-0001)  
<https://www.regulations.gov/document/FDA-2021-P-0460-0001>  
Click the blue "Comment" button

A comment page will open. Type your comment into the box, or copy and paste your prewritten comment, or attach a file of your comment. Tips:

Your remarks can be long or short; the point is that we want the agency to receive an overwhelming volume of earnest and polite comments expressing support for the petition and urging implementation of the measures requested.

If you personally know of anyone harmed by any of the vaccines, please include those details. This is open public comment, available for the world to see, so do not include any personally identifying details

**[NOTE: At the petition site, you'll find an abundance of credible evidence to justify the basis of this petition. So, thanks to those who prepared all this detailed information. Please forward this information to all like-minded friends and colleagues.]**
